The Bad Subjugation

Hardware

- Non-free* designs
- Non-existing or non-free official repair manuals
- Not sustainable as it isn't repairable
- Non-replaceable battery

Software

- Non-free firmware, bootloader, system, drivers and apps
- Modem firmware:
 - Bad isolation allows it to access the main memory
 - Can record audio while not in a call
- Installing free software requires breaking security
- Kernel and drivers:
 - With bugs or backdoors, intentionally or not
 - Written once and forgotten

* Free as in freedom
